Top 10 Industry by Positions

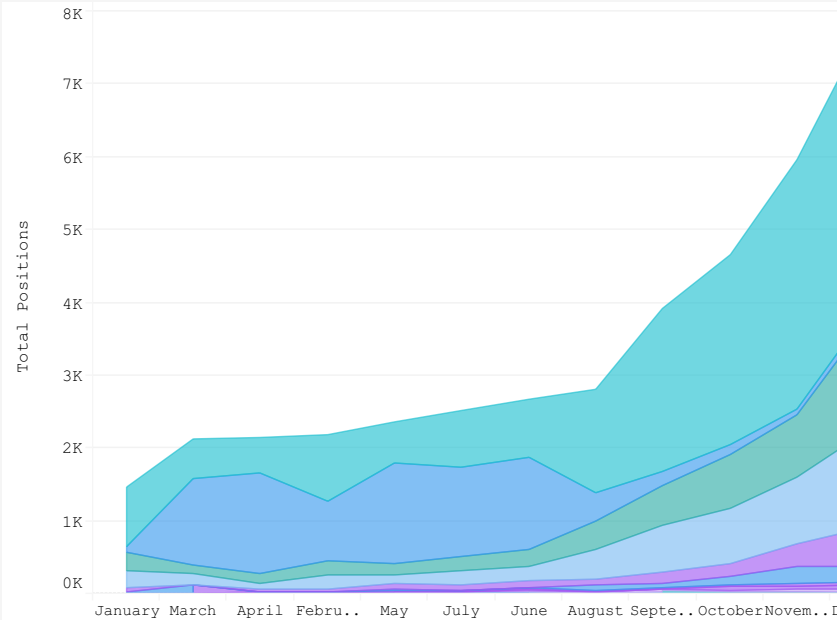

Our analysis of the data showed that the number of job opportunities in the field of technology was the highest, as Vision 2030 aims to develop digital infrastructure, given that it is a key factor in building advanced industrial activities and plays a major role in attracting foreign investments and improving the competitiveness of the economy. Thus, work will be underway in full swing to increase the quality of communications and high-speed broadband technologies, which will raise the need for specializations related to this field, which include:

- Computer science...

Total Positions by Region

Our analysis of the data showed that there was upward trend in total positions. The number of job opportunities in Riyadh was the highest, as Riyadh plays a key role in the Saudi Vision 2030. The goal is to drive the city's economic, industrial and tourism growth in the upcoming years to make Riyadh among the world's top 10 economic cities.

About Project

Problem statement:

The manual search for a suitable job based on the education degree, position jobs, years of seeker experience, and the preferred industries can be time-consuming and prone to getting a not stable job. To this end, computer-based methods offer an exciting solution to support job seekers. In this regard, we suggest a recommendation system based on job seekers' pieces of information through our analysis of job data spread in the most popular platform LinkedIn, where the job seeker meets the employer.

Goal:

Helping the job seeker to search efficiently and effectively for suitable jobs for him, and the career and academic level most in demand in the labor market. The job seeker also knows the various companies in Saudi Arabia.

This project shall help in having a better understanding of the job market in Saudi Arabia with all the new changes and trends, it gives a clear picture of what kind of trends are happening in the jobs and the years of experience related to position and industries. This project can be the lens of jobseekers and HR managers to have a better understanding of job trends.
